**Dr Rico Badenschier**

Mayor  
of the state capital Schwerin

## Dear readers,

This "Clean Schwerin" guidebook is the proven way for providing you with information about the waste collection and disposal options available to you in the state capital. Here you'll find collection days, itineraries, collection points for Christmas trees, information on winter road maintenance and bulky waste, and information on the disposal of electronic waste and garden waste.

Our SDS (Stadtwirtschaftliche Dienstleistungen – Municipal Services) aims to have a comprehensive local collection and disposal system with short routes, straight from your door if possible, clean streets, well-kept parks, green areas and playgrounds. The SDS are supported in this by SAS mbH (Schweriner Abfallentsorgungs- und Straßenreinigungsgesellschaft – Schwerin Waste Disposal and Road Cleaning Company).

More than 16,500 black bins for residual waste, 11,000 brown biowaste containers, 1.3 million yellow sacks and 1.2 million dog waste bags at more than 70 stations in the city area, yellow bins for lightweight packaging and blue for waste paper – there's a huge amount of logistics behind waste and recycling in Schwerin.

New for 2022 is the option of ordering a free yellow bin close to your property instead of yellow sacks. The majority of Schwerin residents said they were in favour of this in a "yellow sack or yellow bin" survey. Switching to a yellow bin is voluntary.

Of course, the coronavirus crisis and the cyberattack on the IT systems of the city government and owner-operated municipal enterprises continued to affect our city's waste management and city cleaning operations. Despite these difficulties, waste management continued without any adverse effects. For this I must thank the staff at the city's owner-operated municipal enterprises and companies. Citizen involvement for a clean city at the traditional Schwerin Spring Clean is possible again after the break in 2020 resulting from the coronavirus crisis. Following the collection campaign in 2021, I hope that the traditional big clean at the start of spring, including the scrubbing party on Berta-Klingerberg-Platz, can take place again this year.

Do you have any questions or concerns about waste management, road cleaning or winter road maintenance? Then contact the staff at SDS and SAS mbH in the usual way. See opposite for the corresponding telephone numbers.

See you soon – and stay healthy!

*Rico Badenschier*

Yours, Rico Badenschier  
Mayor of the state capital Schwerin

**Product responsibility**

The European legislature is, as part of so-called “product responsibility”, increasingly obliging manufacturers to design products in such a way that the waste generated as a result of their production and use is reduced. The keywords here are: durability, reparability, use of recyclable materials. These properties are part of the so-called eco-design. The Blue Angel label offers initial guidance here.

From 2023, food and drink providers in the “to-go” sector must also provide reusable packaging that must not be more expensive than disposable options. Small outlets such as snack shops and kiosks are exempt from this obligation, but customers will need to fill containers they have brought with them.

# Waste prevention and recycling management

Photo: www.pixabay.de

**Waste is both a product and reflection of our affluent society. Nearly everything that surrounds us – be that furniture, vehicles, consumer goods or food – will become waste once it stops being used. Our planet’s resources are limited. Prosperity with less consumption of resources and less waste is not only conceivable, it is also the order of the day.**

As waste is always generated from former raw materials and products, waste prevention and recycling management with the use of recycled materials make an important contribution of the preservation of our planet’s resources.

In the following sections on waste separation, recycling and second hand offers, you’ll learn how you as a consumer can

strengthen the reuse and recycling of a product in its life cycle from raw material to waste.

**Of course, the best waste is waste which isn’t generated in the first place! That’s why we want to take this opportunity to give you tips on how to avoid waste.**

- Avoid elaborate product packaging, gift packaging or single-portion packaging: use reusable containers instead of single-use containers.
- If possible, buy unpackaged food.
- Don’t use disposable products: when purchasing products like electrical appliances, pieces of furniture or toys make sure they’re durable or easy to repair.

- Choose environmentally-friendly products: choose recycled products made from waste paper or other waste materials.
- Use reusable packaging for things like detergents or spices.
- When buying, check for recyclable materials like glass or paper, wood and metal.
- Avoid batteries: use products with solar cells, rechargeable batteries or power supplies.

## Avoiding waste = saving money

**In a city with more than 96,000 residents, a large amount of waste is generated. Whether it’s residual waste, lightweight packaging, waste glass, paper, bulky waste or biowaste, organising the removal of it all is a logistical feat.**

Around 16,500 residual waste bins and 11,000 biowaste bins need to be emptied at a fixed rhythm.

Together with its contractual partners and service providers, the SDS – Stadtwirtschaftliche Dienstleistungen Schwerin (Schwerin Municipal Services) – takes care of the disposal of recyclable materials and waste.

The disposal of waste paper and yellow sacks is offered close to home. There are 151 collection points in Schwerin to which

you can take your separated recyclables, with recycling containers for lightweight packaging or used paper at 70 of them.

# Yellow bins for packaging

**Reducing the amount of waste and recovering recyclable materials are important contributions to the protection of the environment and conservation of the earth’s resources. You can provide effective support for this task by putting waste containing recyclable materials out for separate collection.**

**Lightweight packaging and yellow sacks**  
You can dispose of your lightweight packaging in yellow sacks/yellow bins and in the corresponding recyclable material collection containers.

**What is lightweight packaging?**  
Packaging like tin cans, drinks cans, metal fasteners, aluminium trays, aluminium lids, aluminium foil, carrier bags, sachets, plastic wrap, bottles, cartons, other packaging made from plastic, drinks and milk cartons, and vacuum packaging made from composites, so long as they are clean and empty.  
**What does not belong in the yellow sacks or in the yellow bins?**

Glass, paper, cardboard packaging, any packaging with residual contents containing pollutants and residual waste.

**How much do yellow sacks/bins cost?**  
Yellow sacks and yellow bins are available for free (as long as they comply with the DSD Agreement). In areas with sack collection, you can order comfort bins for EUR 7.14 per year from SAS mbH.

**Where are yellow sacks available from?**

- SAS mbH, Ludwigsluster Chaussee 72
- Citizen’s Office, Am Packhof 2 - 6, Town Hall
- Public utility company’s customer centre, Mecklenburgstraße 1 and Eckdrift 43 - 45
- Recycling centres, see page 9 for addresses

**When are the yellow sacks/yellow bins collected?**

The yellow sacks/yellow bins must be ready for collection by 7:00 am at the latest on collection day. You can find the collection days for your street on the waste collection calendar from page 10 onwards. Bags of recyclable materials must be tied up and left in a clearly-visible place.

In the city centre, recyclable materials are collected via recycling containers or yellow bins.

**Please note: yellow sacks which have been filled incorrectly will be left behind!**

Pick out items like pieces of plastic or residual waste and put outside again on the next collection day.

**Recycling**

Plastic content is recovered from the lightweight packaging collected in the yellow bag and the yellow bin and then recycled into a new material: Systalen.

This plastic-based granulate serves as a source material for plastic products in the construction industry, traffic engineering, logistics and packaging technology and replaces the production of new plastics from primary materials like petroleum and coal.

PET plastic is primarily used for food packaging, particularly bottles, as well as foil or even textile fibres. PET recycling has achieved a high level of economic efficiency.

PET is sorted out of the waste using laser spectroscopy and processed under recycling code 01 for textile fibres, foil, thermoformed products and new bottles and containers.

## Waste collection fees – includes numerous services

**The waste collection fees cover more than you would assume at first glance. The following services are included:**

- Residual waste disposal
- Bulky waste disposal once a year
- Waste paper disposal
- Organic waste bin collection
- Operation of recycling centres
- Operation of mobile hazardous waste units
- Acceptance of green cuttings

**The waste collection fee is made up of a basic fee and a service charge:**

**Basic fee:** calculated according to the number of usage units.

This means residences, shops, workshops and business premises.

**Service charge:** this is derived from the number of containers and how often they are emptied. The amount charged is regulated in the statute on household waste fees.

**Do you have any more questions on this topic? Give us a call on ☎ (0385) 633 16 72 or 78.**

**More information here:**

#### Tips for recycling

- Shred or fold up big or bulky boxes before disposal.
- Buy and use recycled paper. Recycling paper saves water, energy and raw materials, and closes the materials cycle.
- Collecting and recycling waste glass is good. Using reusable bottles is better!
- Separate the metal and plastic closures from bottles and glass; they belong in the yellow sacks.

**There are currently two systems for collecting waste paper from households in the city: in the collection system, waste paper is collected close to your home in blue bins, which can be ordered in three sizes (120, 240 or 1,100 litres). Under the bring system, there are three cubic metre collection containers at selected recycling centres. Use the paper bins close to your home – they are convenient and free to use.**

#### What counts as waste paper?

Newspapers, magazines, folded boxes, cardboard and other printed products

#### What does not count as waste paper?

Very dirty household paper (residual waste), greaseproof paper, wax paper and serviettes (residual waste), wallpaper (residual waste), tissue paper, tissues, nappies

(residual waste), photos and carbon paper (residual waste), paper heavily coated with plastic or metal (residual waste or recyclable materials), drinks and milk cartons (yellow sack), label backing paper (residual waste), film-coated paper and cardboard boxes (residual waste)

#### Please don't!

#### Where are blue bins available from?

The property owner can order them in writing from the SAS mbH customer service team

at SAS mbH – Kundenservice, Ludwigsluster Chaussee 72, 19061 Schwerin or SDS Eckdrift 43 - 45, 19061 Schwerin

#### How often are the blue bins emptied?

They are emptied every four weeks. Blue bins must be ready for collection by 7:00 am on collection day. You can find the collection days for your street on the waste disposal calendar from page 10 onwards. The cubic metre collection containers are emptied at least once a week.

#### How much do blue bins cost?

No additional fee is charged for blue bins.

#### Please note:

Waste paper may not be contaminated. Bins which have not been correctly filled will not be emptied.

## Bottles and waste glass

#### Please note:

Do not leave waste glass, paper/boxes or residual waste next to the collection point.

The collection containers for waste glass are located at the recycling centres in the city.

#### What counts as waste glass?

All glass packaging: bottles and other containers made from glass are separated into clear, green and brown glass and disposed of separately.

#### What does not belong in the glass container?

Window panes and other flat glass (construction waste), mirrors (residual waste), lightbulbs (residual waste), porcelain (residual waste), stoneware (residual waste), fluorescent tubes (problematic waste).

#### When are the glass containers emptied?

Waste glass containers are emptied every 14 days. This can be changed to weekly emptying, as required. If the container is frequently full, please let us know: Tel. (0385) 633 1670

#### What else should be considered?

To avoid noise pollution, the glass containers may only be used Monday to Saturday between the hours of 7:00 am and 7:00 pm. Please be considerate of local residents. No glass may be thrown in on Sundays or holidays or at night.

## Blue bins for paper

## Brown bins for organic waste

**Brown bins are used for collecting organic waste, which is then processed in a fermentation plant.**

Schwerin is the first commune in Mecklenburg-Vorpommern to run a combined composting and organic waste fermentation facility.

#### What goes in the brown bins?

- Fruit and vegetable waste
- Coffee grounds and used teabags
- Spoiled food, eggshells
- Cut flowers and potted plants
- Green cuttings from trees, bushes and grass

- Cooked leftovers, meat, bones
- Small amounts of feathers, hair, hay and straw, as well as wood and sawdust

#### What doesn't go in the brown bins?

- Inorganic waste like **plastic bags**
- Litter for small animals, clumping litter
- Tree cuttings (heavy wood) and mortar
- **Compostable plastic bags for organic waste**

#### Where are brown bins available from?

Property owners can order one in writing from SDS, Eckdrift 43 - 45, 19061 Schwerin provided that at least one residual waste bin is available.

#### How often are the brown bins emptied?

They are emptied every two weeks. Brown bins must be ready for collection by 7:00 am on collection day. They are emptied weekly in large residential complexes. You can find the collection days for your street on the waste disposal calendar from page 10 onwards.

#### How much do brown bins cost?

No additional fee is charged for brown bins.

#### In what sizes are the organic waste bins available?

Brown bins can be ordered in sizes of 120 or 240 litres.

## Facts about green cuttings and organic waste sacks

#### What disposal options are there?

- Composting in your own garden,
- Taking it to a recycling centre,
- Using organic waste sacks. You can use up to 5 sacks – or up to 10 sacks from September to November – in addition to your organic waste bin.

#### What are organic waste sacks, and where can I get them from?

These 100-litre capacity paper sacks with "Only for leaves and garden waste" printed on them are available from recycling centres,

the SAS, the citizens' centre in the Town Hall and the public utility company's customer centre.

#### What can go in the organic waste sacks?

Only green cuttings, leaves and parts of plants. Please only fill with a maximum of 20 kilograms so that the sacks can still be transported.

#### What compostable waste do recycling centres accept?

Green cuttings, hedge trimmings, shrubbery, leaves and grass cuttings.

#### How much do organic waste sacks cost?

EUR 0.60 each.

#### How much does delivery cost?

No additional fees are charged for the use of organic waste sacks. The delivery of loose green cuttings/organic waste costs EUR 3.00 per cubic metre.

A fee of EUR 0.30 per sack (each with a volume of 100 litres) will be charged for the delivery of other sacks (e.g. blue sacks).

## Organic waste from allotments

Garden waste, leaves, hedge trimmings and similar compostable materials in allotments may only be disposed of in organic waste sacks if they are taken to recycling centres. Leaving the sacks at recycling collection points or in someone else's organic waste bin is considered illegal waste disposal and will result in a fine. Allotment associations which are not yet connected with the public waste disposal system must use commercial facilities.

## Do not burn green cuttings

Burning cuttings from trees and bushes is prohibited in Schwerin as there are enough alternatives for getting rid of your green cuttings and organic waste throughout the city.

Dry, untreated pieces of wood and cuttings from trees and bushes may only be burned as part of an Easter bonfire from Maundy Thursday until Easter Monday. If you wish to light an Easter bonfire please file a request at: Event management, Am Packhof 2-6, 19053 Schwerin.

#### Avoid odours and fruit flies

Organic waste bins start to smell quite quickly when it's warm. Your collection container should be emptied and cleaned out regularly. You can combat unpleasant smells by scattering stone meal – available from hardware stores – over your organic waste. This will also keep fruit flies away.

#### Convenient place for your brown bin

Of course, it helps if you put your organic waste bin in a shaded, protected place. If no such place is available, you can build an enclosure, optionally with greenery, to provide shade and a nice view.

#### Tips to combat fluids in your organic waste bin

To prevent excessive fluid collecting at the bottom of your organic waste bin, cover it with newspaper. The newspaper absorbs the moisture. If damp organic waste gets into your brown bin and there's a frost over winter, this may result in the frozen waste sticking to the bottom or sides, meaning that it cannot be completely emptied. It helps to wrap kitchen waste in newspaper.

#### Please note:

No plastic in the organic waste bin! Do not use plastic bags labelled as compostable!

Every user is responsible for cleaning their own organic waste bin.

## Grey bins for residual waste

The grey residual waste bins are there for all the rest of the waste which can no longer be salvaged due to contamination or mixing.

### What counts as residual waste?

From folders to cigarette butts, we have compiled a clear table for you on page 24 which should help you with sorting. You'll find more information in our ABC of Waste on our website.

### How much do grey bins cost?

The statute of household waste fees regulates the fee for grey residual waste bins.

### Who can order or change orders for residual waste bins?

This can be done by the property owner or by a representative with the appropriate authorisation.

### What size and how many grey bins do I need?

Each property should have at least one residual waste bin available. It must not be overflowing (it must be possible to close the lid). Waste must not be left next to the grey bins. A minimum residual waste container capacity of ten litres per resident and week must be available for residential properties.

### What sizes/volumes are there?

Grey bins with capacities of 40, 80, 120, 240, 1,100 and 5,000 litres are in use in Schwerin.

### What needs to be considered when setting up the bins?

Grey bins must always be set up on your own property.

### What needs to be considered when it comes to emptying the bins?

Grey bins must be ready for collection by 7:00 am on collection day. You can find the collection days for your street on the waste disposal calendar from page 10 onwards.

### Do you have any questions about the specific amount of your fee?

Give us a call on  
Tel. (0385) 633 16 76 or 72, 78 and 80

#### Please note:

Only residual waste sacks with a specific SAS label will be collected – and not other blue sacks.

**SAS residual waste sacks**  
When you temporarily produce large volumes of waste, e.g. on holidays or when moving house, you can use the SAS residual waste sacks.

You will be charged a fee of EUR 2.64 each for these sacks.

You can get these residual waste sacks from the SAS customer service team:  
Ludwigsluster Chaussee 72  
19061 Schwerin

Tie up the sacks and leave them for collection next to the grey residual waste bins on the corresponding collection day for residual waste.

You'll find all the collection days at a glance, a reminder function and more on our waste collection calendar app:

## Bulky waste disposal

### What is bulky waste?

Bulky waste is made up of household items, which will not go in the residual waste bins due to their size or material quality. That means things like furniture, floor coverings, etc. It also includes electronic waste, fridges, freezers and boilers.

### What does not count as bulky waste?

Used tires, wallpaper, materials from construction and renovation works, windows, doors, bathroom accessories, problematic waste. (see the table on p. 24)

### What options are there for bulky waste disposal?

- Free annual collection by the SAS.
- Taking it to a recycling centre (please enquire about specific prices with the recycling centres directly, see page 9).

### How much bulky waste is collected and how much does it cost?

Each household can dispose of up to 5 m<sup>3</sup> of bulky waste for free per calendar year.

### What should be considered when ordering?

You can register for bulky waste disposal through the bulky waste card, by fax or online with the order form at [www.sas-schwerin.de](http://www.sas-schwerin.de). The processing time lasts about 4 weeks.

**Important:** the SAS confirms collection days.

### What happens if I have more bulky waste?

Any additional amounts are to be arranged with the SAS and subject to a fee.

#### Please note:

Do not leave your bulky waste on the side of the road until the morning of your collection day.

### Mobile hazardous waste unit route plan

The following hazardous material collection points will be visited by the mobile hazardous waste unit:

- **Feldstadt**  
Bertha-Klingberg-Platz
- **Friedrichsthal**  
Car park in Wolfsschlucht
- **Görries**  
Lilienthalstraße
- **Mueß**  
Zum Alten Bauernhof
- **Neumühle**  
Treppenberg next to the glass container
- **Neu Zippendorf**  
Berliner Platz (lower part)
- **Schelfstadt**  
Schelfmarkt/Lindenstraße
- **Warnitz**  
Trebber Straße 2
- **Werdervorstadt**  
Bornhövedstraße 71
- **Weststadt**  
Supermarket on Bertolt-Brecht-Straße
- **Wickendorf**  
Lübstorfer Weg 6-12

You can find up-to-date information on dates at [www.sds-schwerin.de](http://www.sds-schwerin.de).

Hazardous materials are to be given to the mobile hazardous waste unit specialists in person at collection times.

Leaving waste at the collection point ahead of time is considered illegal waste disposal and will result in a fine.

#### Please note:

Bring your hazardous materials to the mobile hazardous waste unit in sealed, leak-proof containers.

## Disposal of electronic waste

Since July 2016, large retailers have been obligated to take back old electrical and electronic devices. This is prescribed by the new Electrical and Electronic Equipment Act (ElektroG2). Businesses are considered "large" retailers if they provide more than 400 m<sup>2</sup> of sales space for electrical and electronic devices, as are online retailers with the same amount of space dedicated to shipping and storage. This take-back obligation shall apply in the event of the purchase of a similar device. Large retailers must also take

back small devices (no edges longer than 25 cm) without the purchase of such a device.

### What counts as electronic waste?

Changes to this legal situation are currently in the pipeline. Photovoltaic elements from private households can be taken to recycling centres north and south. Electric cookers, washing machines, dishwashers, fridges and freezers, televisions, radios, computers, lawnmowers, small appliances, mobile phones, CD or MP3 players, microwaves and electric toys.

### What does not count as electronic waste?

Scrap metal, batteries and rechargeable batteries.

### How should electronic waste be disposed of?

Via the retail sector ("large" distributors/retailers), public collection points at recycling centres or bulky waste collection. Waste from households is accepted for free. Electronic waste does not belong in residual waste.

## Disposal of problematic waste

### What is problematic waste?

Contaminated household waste, such as batteries, paint, varnish, cleaning agents, rechargeable batteries and even energy-saving bulbs.

### Where can problematic waste be disposed of?

- Only at
- the recycling centres (more on page 9)
- the mobile hazardous waste unit

### Never via your grey bin!

**How much does it cost?**  
It is free of charge.

## Lithium-ion batteries do not belong in residual waste

Defective lithium-ion batteries have an increased risk of self-ignition and may result in fires during transport or at a waste sorting plant. This may result in poisonous vapours, with the consequence being economic damage to vehicles and facilities. So, here are a couple of rules: Remove the batteries from old devices BEFORE throwing the devices away. Batteries are electronic waste.

You can get information about the disposal of electronic waste from the waste advice team and the SDS website.

Tel. (0385) 633 1670

### Construction waste recycling

Mineral waste such as bricks, concrete, plaster can be used as substitute materials in street and road construction.

Glass and metal are melted down into recycled construction materials.

Waste that cannot be recycled is utilised thermally as a substitute fuel.

Of the construction and demolition waste generated in 2018, 199.8 million tonnes of material were recycled and 73.3 million tonnes were recovered as recycled building materials. This quantity corresponds to 12.5% of the construction industry's requirements for building construction, civil engineering and road construction.

Current research is dealing with improving the recycling of mineral construction waste in such a way that primary raw materials like gravel and sand are replaced by recycled construction materials.

## Separate collection of construction waste

Construction waste makes up the majority of all waste. In 2018, 418.2 million tonnes of waste were generated in Germany, of which 228.1 million tonnes were construction and demolition waste.

The legal requirements for separate collection also apply to construction waste. If the quantity exceeds 10 m<sup>3</sup>, construction waste shall be collected separately insofar as this is technically possible and economically reasonable. Larger construction measures of house builders are also affected by this. When planning a construction site, it is im-

portant to consider what fraction of construction waste should be collected in a separate container and the extent to which so-called mixed construction waste is generated.

Mixed construction waste generates high disposal costs because it has to be pre-treated in sorting plants before recycling or disposal. With clever planning, you may even save cash – the disposal of insulation material, for example, is ten times as expensive as the disposal of roof tiles.

The following things are to be collected separately:

- Glass (170202)
- Plastic (170203)
- Metals (170401 to 170407 and 170411)
- Wood (170201)
- Insulation material (170604)
- Bituminous mixtures (170302)
- Construction materials on a plaster base (170802)
- Concrete (170101), • Brick (170102)
- Tiles and pottery (1700103)

## Disposing of construction waste

The disposal of any waste accrued as part of construction work is not a mandatory municipal waste disposal task. The developer will need to hire a company certified for the disposal of construction waste for this.

**What is construction waste?**

- Broken-off bits of concrete and masonry,
- Roof tiles, concrete roofing tiles, grout,
- Stove tiles, floor/wall tiles,
- Insulation materials, glass wool,
- Roofing felt, corrugated asbestos boards and flat asbestos boards,

- Treated woods, windows and door frames,
- Large amounts of carpet, PVC, floor coverings and floor boards,
- Foil and cardboard heavily contaminated with foreign matter, etc.

### Caution:

Construction waste classified as hazardous – asbestos boards, sealants containing PCB and roofing felt for example – is subject to the Ordinance on Waste Recovery and Disposal Records and, as a result, can only be transported and disposed of by certified specialist waste disposal companies.

### Please note:

Construction waste does not belong in the grey bin! Hire a certified waste disposal company.

## Recycling centres in Schwerin

Alba Nord GmbH and SAS Schweriner Abfallentsorgungs- und Straßenreinigungsgesellschaft mbH are competent and reliable partners of the state capital Schwerin.

It is free for private households to use recycling centres in the city of Schwerin. Traders in the city and private households in the districts can use the service for a fee. Photovoltaic elements can be delivered to the Recycling centre north (Ziegeleiweg 12, 19057 Schwerin).

### Costs:

The disposal of used batteries, electrical appliances, hazardous waste and scrap is free.

Find out the price of disposing of bulky waste, household waste, green cuttings, etc. from the recycling centres.

On behalf of the state capital Schwerin

### Operator: ALBA Nord GmbH

Ziegeleiweg 12  
19057 Schwerin

### What happens to the Christmas trees?

There are numerous collection points for disposing of Christmas trees throughout the city of Schwerin and in the various districts.

You must remove the decorations from your Christmas tree before you can get rid of it.

The collected Christmas trees are composted.

### Dates and information

Dates and location will be published in the local press in due course.

You will also be able to find this information on our website, [www.sds-schwerin.de](http://www.sds-schwerin.de).

### Please note:

Collections will take place in the first half of January, from 4 to 18/01/2021.

## On to the "Kehrwoche" from 23 March until 2 April 2022 for the 26<sup>th</sup> Spring Clean!

Last year, we successfully carried out the 25<sup>th</sup> anniversary of the annual big clean in the city.

Under some restrictions caused by SARS-CoV2 protection measures, both well-known and hidden corners of dirt in urban areas and parks were tackled in small groups and family groups.

The roughly 1,035 participants were not thwarted by the difficult conditions and collected 4.5 tonnes of waste.

The current plans are for the "Kehrwoche" for the 26<sup>th</sup> spring clean to take place from 28/3 to 2/4/2022. We also hope to be able to hold the Saturday scrubbing party again. We will provide information about what will hap-

pen during the "Kehrwoche" via local press and on our website in due course.

We would be delighted if you would once again actively support us in showing Schwerin from its most beautiful side in spring 2022.

### Dog toilets on many corners

#### Bag dispensers for getting rid of dog waste

The SDS has set up belloo bag dispensers in 80 locations, mostly in close proximity to green spaces and on footpaths. These dispensers are refilled on a weekly basis.

#### Here's how it works:

To use the dog toilets, dog owners simply take a bag from the dispenser, put the bag over their hand and pick up the parcel their dog left behind. After picking up the dog waste and tying the bag, simply dispose of it in the nearest rubbish bin.

#### You can get dog waste bags for free from here:

The public utility company's customer centre  
Mecklenburgstraße 1 and  
Eckdrift 43 - 45

Recycling centres  
North – Lankow:  
Ziegelweg 12  
South – Stern Buchholz:  
Ludwigsluster Chaussee 53

The Citizen's Office  
Am Packhof 2 - 6

### Please note:

You can find a complete overview of the bag dispensers online at [www.sds-schwerin.de](http://www.sds-schwerin.de).

## Cleanliness in green areas

Whether it's a place of silence and relaxation, a playing field for exercise, fun and sport or a meeting place for friends and strangers: Schwerin's green spaces and recreational facilities attract thousands of visitors every day, and not just in the summer. This delights all those who deal with the upkeep of the facilities. Parks are essential for leisure and recreation in

the city. But in places where so many people come together, even seemingly small lapses and negligence have great consequences – and mountains of waste can pile up.

We are used to leaving it up to others to remove these mountains: "Someone will clean that up," you think, but you're wrong. The most effective way to get to

grips with waste is the same way that it develops: with lots of small contributions. Take your waste home with you, or so the slogan goes. The green parks need responsible visitors. Our own behaviour also contributes to the appearance of the green spaces on our doorsteps.

Many thanks for your cooperation.

### Please note:

You can find a complete overview of the bag dispensers online at [www.sds-schwerin.de](http://www.sds-schwerin.de).

# Old clothing collection and second hand

**Old clothing collection in Schwerin**  
In cooperation with four charitable organisations (Arbeitslosenverband, Dobbertiner Werkstätten, DRK, Zukunftswerkstatt e.V.), the city of Schwerin is carrying out an old clothing collection.

As part of this, appropriately-marked collection containers are available throughout the city.

There is also the option of dropping off old clothing at charity shops. From here, the clothing is given to those in need for a small fee.

**Furniture exchange**  
The "ANKER" furniture exchange collects donated furniture for free. It is refurbished in the workshop and distributed to charity shops or sold in the exhibition house. If you want to buy cheap furniture, this is the place for you.

All furnishings are available, from living rooms to kitchens with electrical appliances. You can find more information online at:

[www.anker-sozialarbeit.de](http://www.anker-sozialarbeit.de)

**Second hand**  
When we downsize or sell a home, we are presented with the task of parting with furniture or household appliances that we have used or even become fond of. A utility value check may uncover an old but still useful item that you can pass onto a new owner by using the well-developed network of second hand shops and exchanges in Schwerin.

We have put a list of some useful websites in the column on the left.

**Anker furniture exchange in Schwerin**

# Road and pavement cleaning

**Clean streets and footpaths are of particular interest to cities, communities and residents.**

Cleaning work on public streets and places,

the cleaning of footpaths and the emptying of public rubbish bins are all part of a clean city.

The tasks of road and pavement cleaning are defined in the statute on road cleaning and

the statute on fees for road cleaning. The obligations of the city and the residents are designated according to cleaning category in the statute on road cleaning depending on the importance and requirements.

## Overview of the obligations of the city and residents from the applicable statute:

Cleaning categories	Obligation of the city	Obligation of the residents
Cleaning category 0	Clean the entire road and the pavement 6 x per week	–
Cleaning category 1	Clean the road 3 x per week	Clean the footpaths, bike paths, grass verges, parking bays, etc. on a weekly basis
Cleaning category 2	Clean the road on a weekly basis	Clean the footpaths, bike paths, grass verges, parking bays, etc. on a weekly basis
Cleaning category 3	Clean the road every 14 days	Clean the footpaths, bike paths, grass verges, parking bays, etc. every 14 days
Cleaning category 4	Clean the road every four weeks	Clean the footpaths, bike paths, grass verges, parking bays, etc. every four weeks
No cleaning category	–	Clean the entire road from the property to half-way across the road every 14 days

As per the statute on road cleaning, the streets in Schwerin are to be assigned to individual road cleaning categories. If a street is not named, the residents are primarily responsible for cleaning the streets and footpaths.

Cleaning the footpaths includes removing contaminants such as dog waste, rubbish left

lying around and weeds. Road cleaning on public roads is carried out by SAS mbH. The road cleaning calendar can be found online at [www.sds-schwerin.de](http://www.sds-schwerin.de).

Residents will be charged a road cleaning fee for road cleaning carried out on public roads. The amount of the road cleaning fee is dependent on the frequency of cleaning

throughout the year and is defined in the statute on fees for road cleaning.

The obligations for winter road maintenance are also regulated in the statute on road cleaning.

**Pavement cleaning – what to consider**  
Pavement cleaning is transferred to the residents in accordance with the statute on road cleaning.

This includes combined bike paths and footpaths, connecting paths and stairways, and sections of roadway marked as footpaths.

**What needs to be done?**  
Regularly sweeping footpaths ensures that they are free from sand and other small pieces of dirt like leaves and fruit from nearby trees. It makes no difference who owns the tree. Regular cleaning of the footpaths make them safer to use.

Sweeping dirt or leaves from the pavement on to the road is not allowed. Please dispose of whatever you sweep up in the corresponding waste containers on your property.

Weeds which sprout on footpaths must also be removed by the residents. This ensures that footpaths are also kept in a tidy condition. You can find more information in the statute on road cleaning and on our website.

The SDS will assist residents on leafy streets in disposing of the leaves from the trees along the street. More than 160 FIBCs/big bags will be provided in the period from the middle of October until November.

## Please note:

Do not sweep waste and leaves from the pavement on to the road!

- SDS winter road maintenance in numbers:**
- 570 km stretch for gritting
  - 270 km road length
  - 175,000 m<sup>2</sup> footpath area
  - 278 local public transport stops
  - 13 vehicles for the roads
  - Ø 600 t of gritting materials per season
  - Ø 2,000 operating hours per season
  - Ø 90 operating days per season
  - 95 public disabled parking spaces

#### Winter road maintenance concept

The SDS – Stadtwirtschaftliche Dienstleistungen Schwerin (Schwerin Municipal Services), operated by the city of Schwerin, is responsible for organising, carrying out and coordinating winter maintenance of the roads and footpaths in the state capital.

Schwerin's department of roads is responsible for carrying out winter road maintenance on sections of federal roads. Winter road maintenance includes removing snow, gritting packed snow and icy surfaces according to the city's actual and financial capacity and in accordance with the requirements of the state of Mecklenburg-Western Pomerania's Roads and Routes Act as well as the applicable legal regulations. Schwerin's winter road maintenance concept was designed as a basis for action and organisation. The responsibility of the city of Schwerin continues to exist exclusively in accordance with the legal framework shaped by established law.

#### Please note:

Change your behaviour on the road in wintery road conditions!

## Winter road maintenance – services and obligations

**The objective of winter road maintenance is to ensure the safety of public roads and footpaths. Every road user has the obligation to ensure road safety by adjusting their behaviour according to the weather conditions when driving in the winter.**

The statute on road cleaning for the city of Schwerin determines the scope of winter road maintenance services. The basis for this is the winter maintenance concept introduced in 2017.

#### The city's winter road maintenance obligations

The SDS, which is operated by the city, carries out winter road maintenance on important public roads as a municipal provider. Traffic routes are weighted according to their importance for the communal infrastructure and organised into gritting levels. Winter services are classified using the following characteristics:

##### Level A

- Top priority, approx. 310 km
- Main roads and thoroughfares,
- Bus routes, roads with public transport,
- Roads with heavy commuter traffic to and in industrial and commercial areas,
- Roads with steep gradients or steep inclines

##### Level B

- Second priority, approx. 146 km
- Connecting roads,
- Residential streets,
- Roads by schools

##### Level C

- Third priority, approx. 113 km
- Other roads in residential and commercial areas

##### Level D

- No communal winter road maintenance,
- Private roads, traffic-calmed roads, service roads,
- Roads on which winter road maintenance technology cannot be used

#### The city's winter maintenance obligations for footpaths

The city bears responsibility for the winter maintenance on footpaths with high public significance.

##### This includes:

- Pedestrian crossings
- Public places
- Transfer points for local public transport
- Tram and bus stops without residents nearby
- Footpaths in boulevard and promenade areas
- Footpaths and bike paths without residential properties nearby
- General bike paths

##### What will be done?

- Clearing and gritting the roads according to the gritting level by using salt and brine
- Clearing snow from the gritting area if required for road safety,
- Gritting footpaths and bike paths

##### When?

In accordance with the statute on road cleaning, footpath maintenance takes place between 7:00 am and 8:00 pm. Roads and bike paths will be cleared according to capacity in this period.

Any black ice forming after 8:00 pm will be removed by 7:00 am on the following day.

For technical reasons, we have to forego displaying the winter maintenance map this year. You can access this online at [www.sds-schwerin.de](http://www.sds-schwerin.de).

## Winter road maintenance – obligations of owners of adjoining properties

**Residents' obligations are related to public spaces across the width of their property and include the following areas:**

- Combined footpaths and bike paths,
- Bike paths,
- Connecting routes and stairways,
- Local public transport stops in the adjacent pavement area,
- Roads where residents are also responsible for cleaning in the summer.

##### What needs to be done?

- Decreasing surface slipperiness,
- Clearing snow when required for road safety.

**Which resources can be used?**

- Gravel,
- Sand,
- Commercially available anti-skid agents.
- **No salt or de-icing agents!**

##### Why?

- Property owners are responsible and liable for maintaining road safety.

##### When?

- Operating times: 7:00 am to 8:00 pm,
- and removing any black ice or snow forming after 8:00 pm by 7:00 am on the following day.

**How much needs to be done?**

Decreasing surface slipperiness and snow clearing must be ensured over a width of 1.50 m on the pavement.

If the width of the pavement is under 1.50 m, the entire width of the pavement is to be cleared of snow and black ice.

The cleared snow is to be stored on the roadside on a third of the outer part of the pavement.

If the snow encroaches onto the road, the city guarantees the snow will be removed.

##### A question of liability

We all use roads and pavements. Of course, our needs and wants from winter road maintenance are all very different. Nevertheless, road safety must be the main focus. The winter road maintenance obligation for residents comes from the statute on road cleaning. Violations of this obligation may have legal consequences. Residents are liable for any accidents if they do not fulfil their obligations and may – in the event of physical injury resulting from negligence, for example – face criminal proceedings. As a result, property owners should protect themselves by taking out suitable liability insurance. You can also contact us for more information:

Subject to change

## Information

- The snow on pedestrian areas is to be cleared or slipperiness decreased up to the edge of the kerb.
- It must be ensured that public transport can reach stops unimpeded.
- Putting the cleared snow on the side of the road – and thus blocking the drains, inlet pipes, water hydrants, maintenance shafts, etc. – is forbidden.

- Remember wheelchair users and pushchairs when carrying out winter road maintenance and ensure that they too can continue to use the pavement unimpeded.

- Owners of nearby developed land can transfer the obligation to grit the paths and roads and clear them of snow and ice to their tenants.

#### Please note:

Anyone who cannot personally fulfil their winter road maintenance obligations should use private service providers.

### Recycling

In 2020, a total of 45,500 tonnes of waste were collected from Schwerin households, of which 25,700 tonnes were designated for recycling. This corresponds to a per capita total of 475 kg per resident per year (E\*a), with the recycled proportion being 268 kg/E\*a. Of this 81 kg/E\*a of biowaste alone was collected and processed at a biowaste processing plant. The recycling rate can be improved, in particular, by increased collection of lightweight packaging by type via the yellow sacks and yellow bins.

Photo: www.ihlenberg.de

## Processing residual waste from Schwerin households

The residual waste collected from households is reloaded into effective transport loads at the SAS mbH reloading station and transported to IAG-Ihlenberger Abfallentsorgungsgesellschaft mbH for the residual waste to be sorted. By using magnetism, air turbulence and infrared technology for light plastics, the

following types of waste can be recovered during the sorting process: metals, waste paper, cardboard boxes, plastics, biogenic waste and waste with a high heating value. Ferrous and non-ferrous metals are recycled in the smelting process. Plastics, paper and cardboard boxes are marketed as recyclables. The waste with a high heating value is

sent to incineration plants, where the waste heat produced is used for district heating and/or generating energy. The biogenic waste is sent to the Rosenow mechanical and biological treatment centre waste incineration plant, where it is processed into compost.

## Recycling routes for recyclable materials

### No plastic in the biowaste!

For daily kitchen biowaste collections, please only use the commercially available paper bags.

Biowaste fermentation plants cannot process plastic-based collection bags. The same goes for bags furnished with the label: "biodegradable".

It is crucial for the continued use of the resulting compost that it contains practically no impurities.

### Waste glass

The waste glass from the public containers is collected separately according to colour – clear, green and brown – by ALBA Nord GmbH, put into temporary storage and transported to nearby glass factories for melting down.

### Lightweight packaging / Grüner Punkt

Lightweight packaging from recyclable materials containers, yellow sacks and yellow bins are collected by SAS mbH and taken to the recycling facilities located in the contract area. The system operator "Duales System" is responsible for recycling lightweight packaging. The materials are sorted and recycled in their own plants. Non-recyclable components are thermally used.

Photo: Beger

### Bulky waste

Bulky waste is collected and pressed in a special SAS mbH vehicle. Metal parts and wood are sorted using excavators and delivered to the appropriate recycling companies according to type.

Bulky waste remnants are processed into substitute fuels.

### Waste paper / cardboard boxes

Waste paper and cardboard boxes are a sought-after recyclable material on the market. SAS mbH presses material collected from households and public recycling containers into transportable bales and trades them at current prices.

### Waste textiles

The waste textiles collected in the containers of charitable organisations are delivered to a recycling company. Reusable pieces of clothing were sorted out for charity shops beforehand. The remaining textiles are made into insulation and cleaning rags, primarily for the automotive and construction industries.

### Electrical appliances

Waste electrical appliances are transported to recycling plants by EAR, the foundation established by manufacturers.

The city of Schwerin has taken over the collection of waste electrical appliances and uses the so-called primary treatment facility in Stern Buchholz for this purpose.

Recyclable and dangerous components are removed. Empty metal cases are sent to scrap metal recycling.

### Biowaste

Biowaste is collected by SAS mbH and fermented at their treatment facility (biowaste processing plant). Biogas – which is used to generate power and heat with a combined heat and power unit – is produced here. The heat recovered is also used for the process's own heat requirements.

# „FÜR EIN SAUBERES SCHWERIN“

## SDS – Stadtwirtschaftliche Dienstleistungen Schwerin

### Öffentliches Grün

Grüne öffentliche Freiräume, Bepflanzungen an Straßen und auf städtischen Plätzen, die Wälder und Biotope, die Sport- und Spielplätze sowie die Badestellen der Stadt – all das ist das Schweriner Stadtgrün. Es ist die Aufgabe des SDS-Bereiches Öffentliches Grün, diese kommunalen Anlagen gärtnerisch zu pflegen und baulich zu unterhalten, aber auch neue grüne Freiräume zu planen und die Baumaßnahmen zu überwachen.

### Friedhof & Bestattung

Die Schweriner Friedhöfe sind Orte des Erinnerns und des Trauerns. Gleichzeitig sind sie heute auch generationsübergreifend gern genutzte grüne Orte der Erholung und Ruhe inmitten einer lebhaften Stadt. Der SDS nimmt die Aufgaben des Friedhofs- und Bestattungswesens für die Landeshauptstadt mit einem vielfältigen Angebot wahr. In die Zuständigkeit des SDS gehören der Alte Friedhof, der Waldfriedhof und die Trauerhallen auf den Friedhöfen

[www.sds-schwerin.de](http://www.sds-schwerin.de)

### Abfallwirtschaft

Ob Restmüll, Altglas, Papier, Hausrat oder Biomüll, der Abtransport ist eine logistische Meisterleistung. Dass die Abfuhr so reibungslos klappt, dafür sorgt seit 2004 der SDS mit der Abteilung Abfallwirtschaft. Für die praktische Umsetzung der Aufgaben, wie das Abholen der Sammelgefäße oder das Entleeren der Glascontainer, sind Entsorgungspartner vertraglich verpflichtet.

### Straßenunterhaltung

Das Straßennetz von Schwerin umfasst rund 350 Kilometer an Wegen und Straßen. Die Beschäftigten des SDS im Bereich Straßenunterhaltung sorgen dafür, dass die Straßen in einem guten Zustand sind und bleiben. Der Verkehrssicherheit auf den Straßen Schwerins kommt besonders im Winter eine große Bedeutung zu. Die alljährliche Saison des Winterdienstes läuft für den SDS vom 01.11. bis 15.04. des Jahres.
